Evening Brief

Date: Tuesday September 4th, 2018

Weather Summary

Moisture will start to move northwards across Nevada and parts of Utah Wednesday, with an increasing area of mixed wet and dry lightning. Isolated lightning could even reach into far SE Idaho. Drier air works in Thursday from west to east, and then SW to W winds may start to increase across northern areas towards the end of this week ahead of another low pressure system forecast to impact the area. Due to current fire activity in these areas, **High Risk** has been issued for both the lightning Wednesday and winds by the end of the week.

Over Idaho/Wyoming it remains very warm and dry, with afternoon RH levels near 15% the next few days.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Light Initial Attack Activity
National	4	GB New Fires and Acres: 6 fires 150.4 acres; 7,570 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)

Fuels/Fire Potential

Fuels have been steadily drying the past week with ERCs back in the 70th-80th percentile in many areas of Idaho and the 80-90th+ percentile over northern Utah, and the northern half of Nevada. Heavier 1000-hr fuels are still well below normal in many of these areas and near record lows for the time of year in some locations. ERC's are below the 50th percentile across most of the southern third of Nevada, and Utah, into the AZ Strip.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or just below early September normals, and grasses are cured in all areas.

Resources

Aviation within the Great Basin

- 1 VLAT's, 3 LATs, 4 CL-415's
- 21 SEATs, 2 Fire Bosses
- 11 Type 1 Helicopters / 11 Committed
- 13 Type 2 Helicopters / 10 Committed
- 20 Type 3 Helicopters

Crews Committed within the Great Basin

- 12 IHCs Committed / 0 Available
- 19 T-2 IAs Committed / 0 Available
